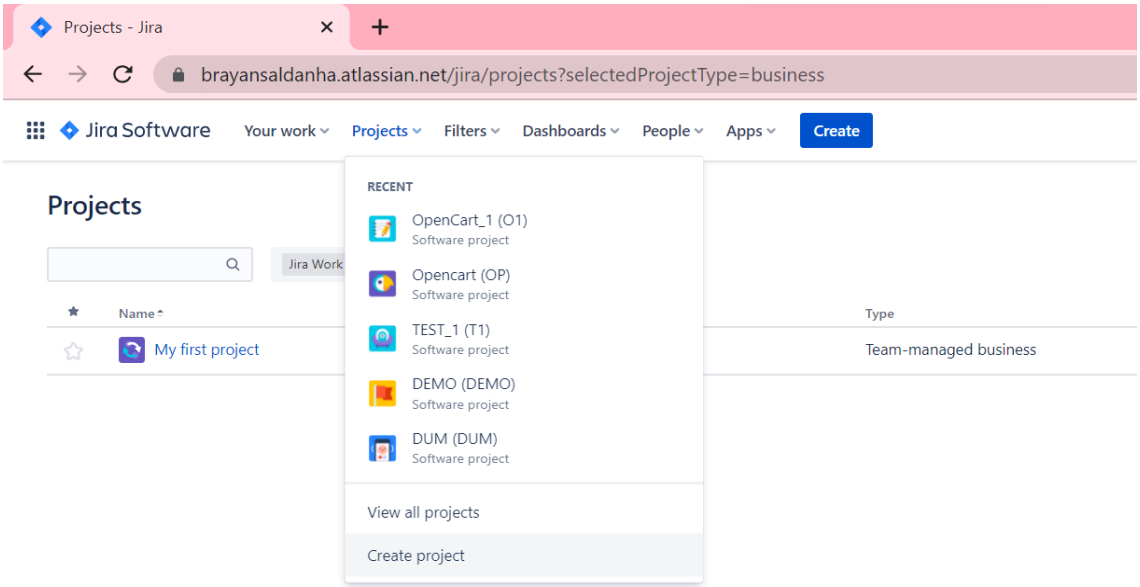
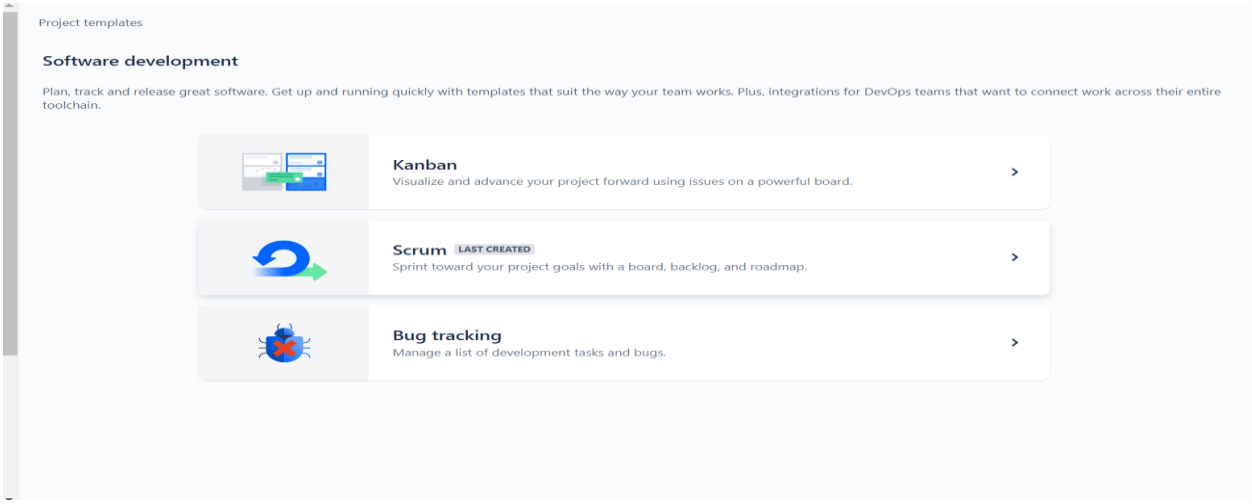
Automation testing documentation in JIRA

This documents records the steps taken to document the automation testing part of the final assessment in JIRA

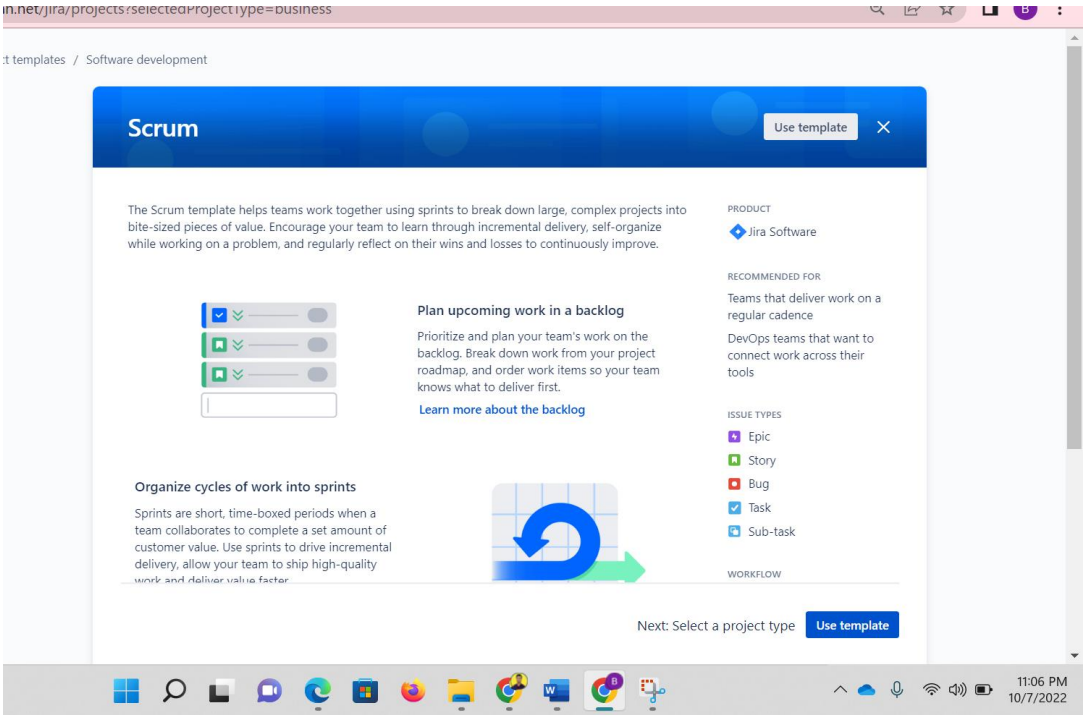
i) Creating a new project



b) Selecting Scrum as the agile framework used

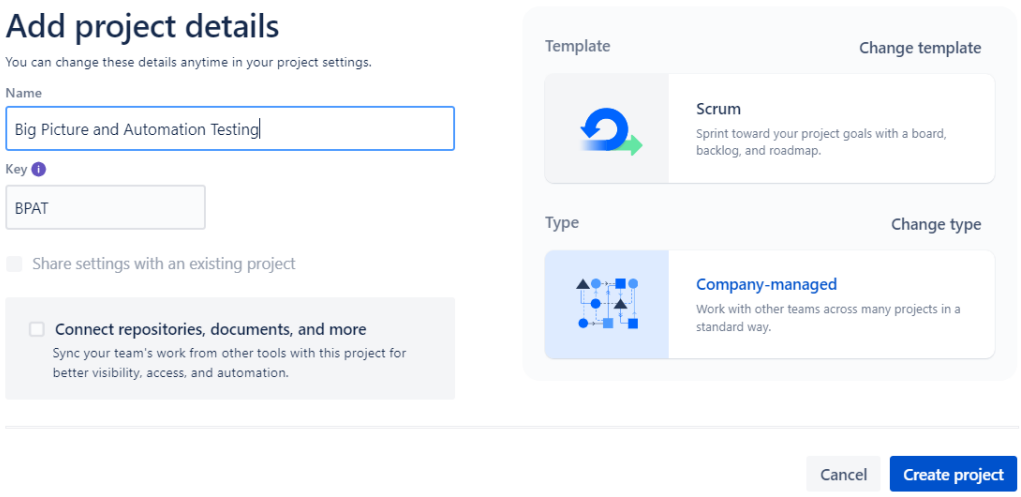


c) Selecting use template of scrum

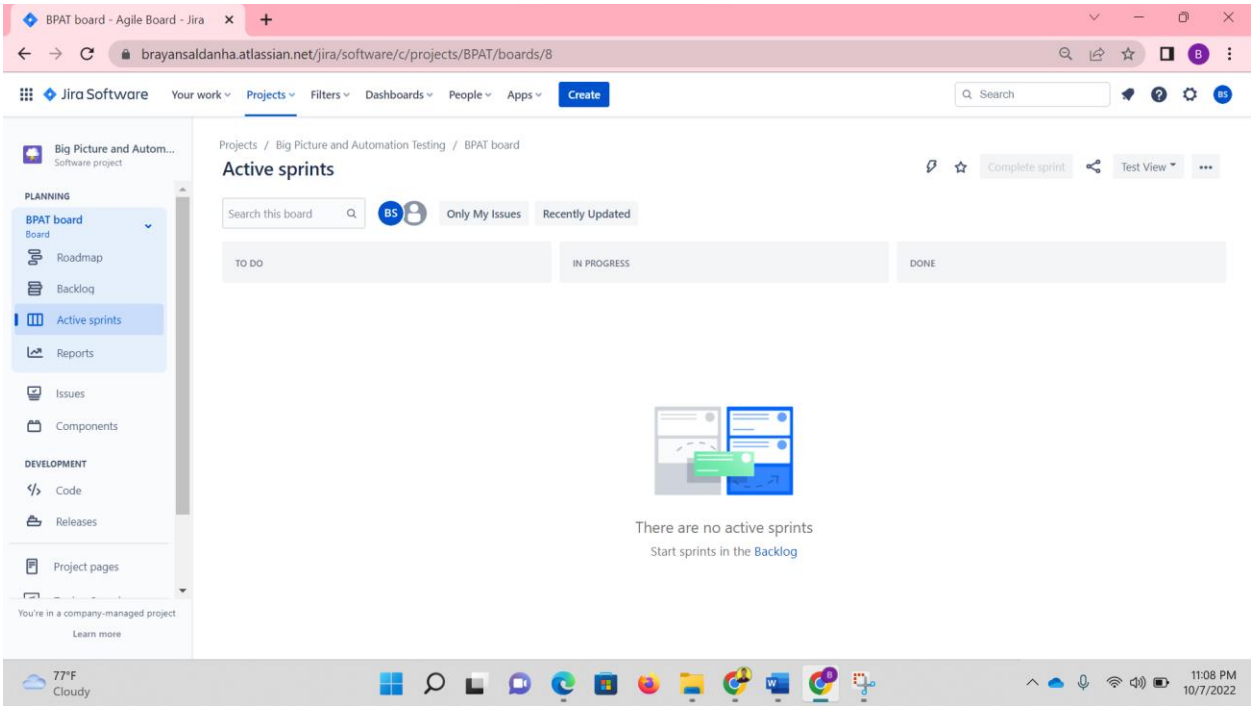


d) Selecting company managed project

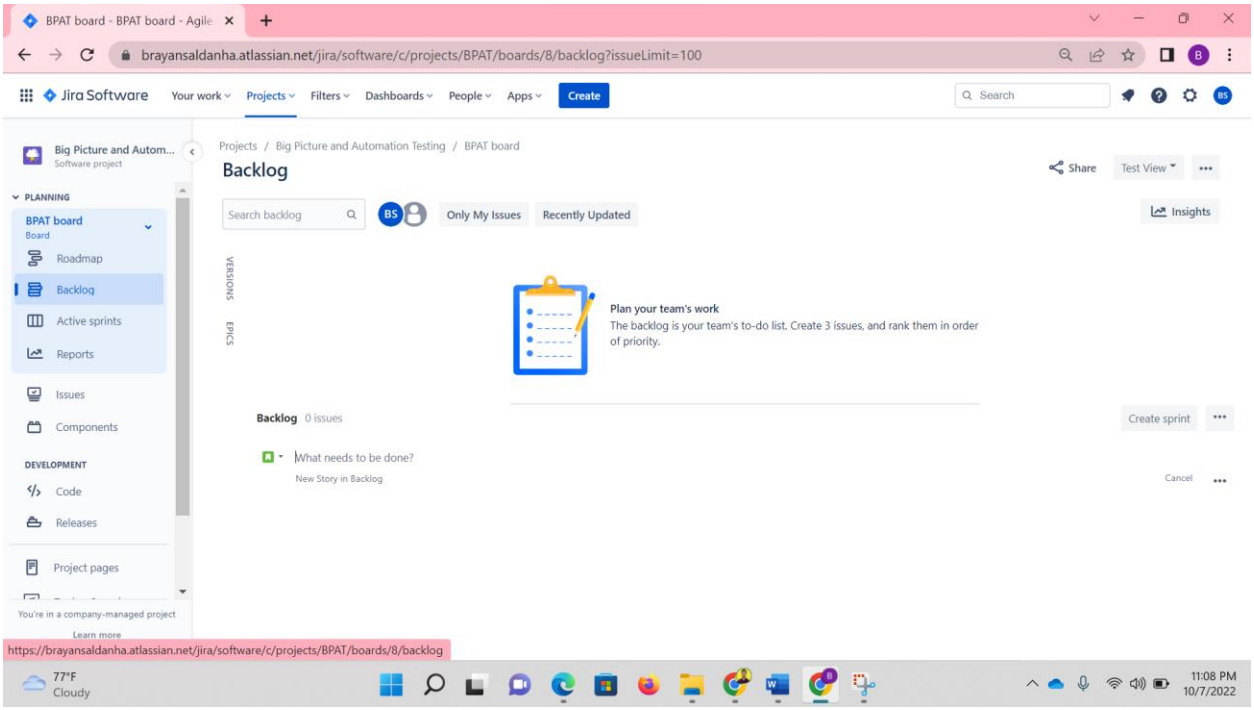
e) Adding the project name



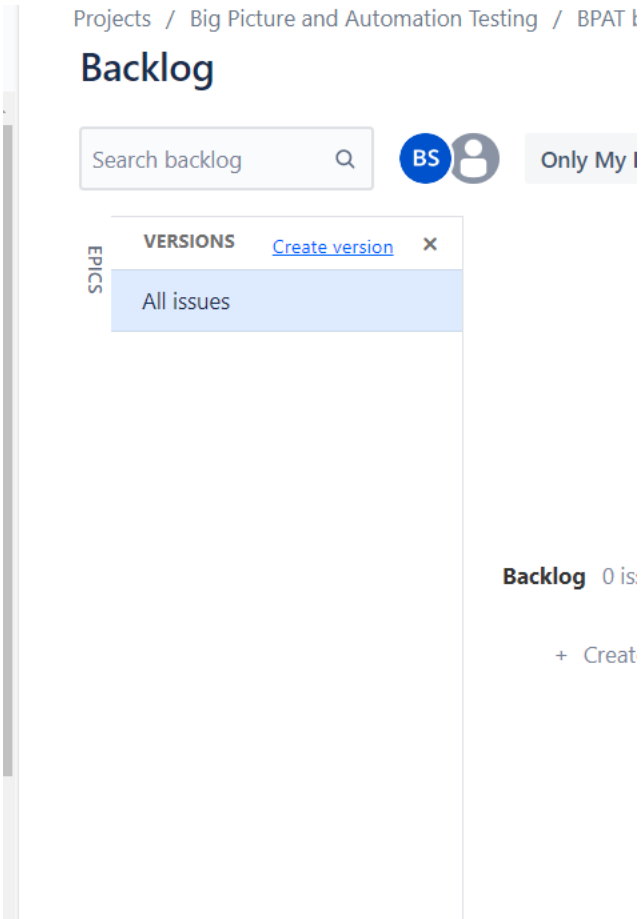
f) This is the active sprints page



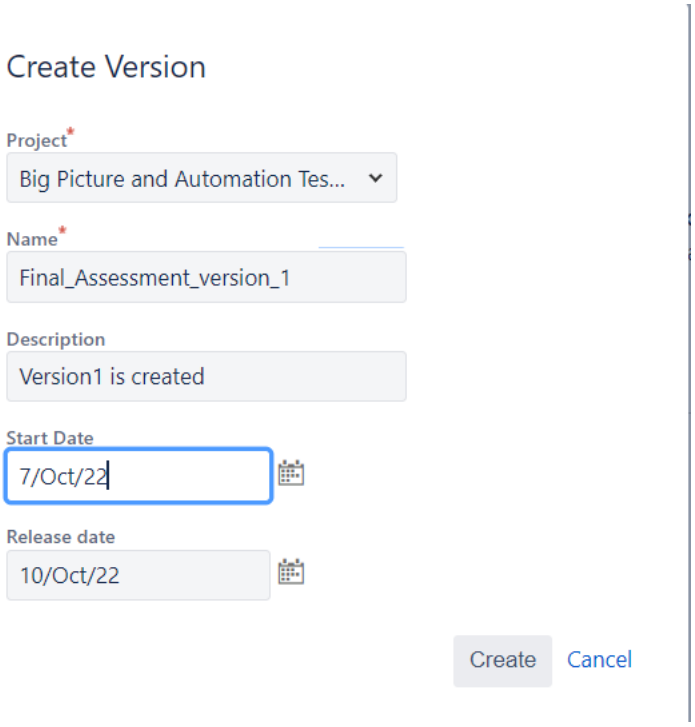
g) This is the backlog page



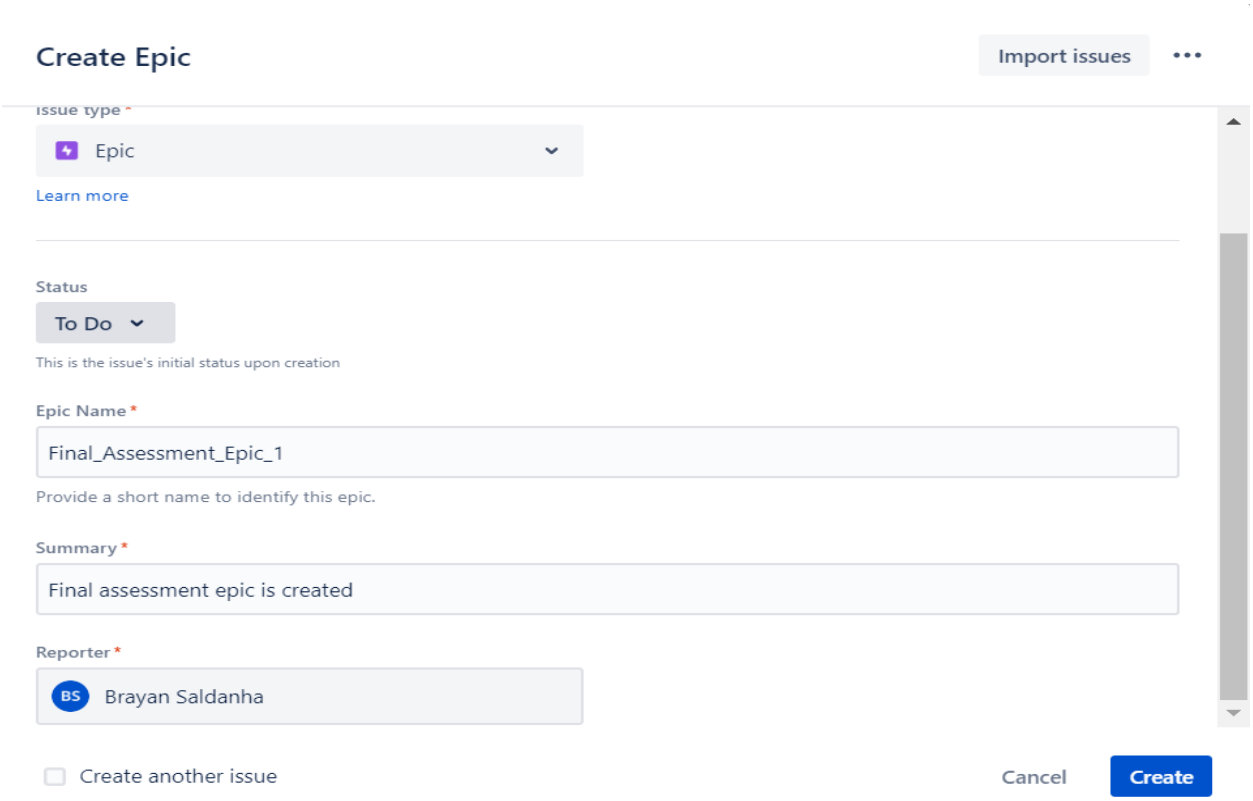
h) Creating a version by clicking on the side vertical version button



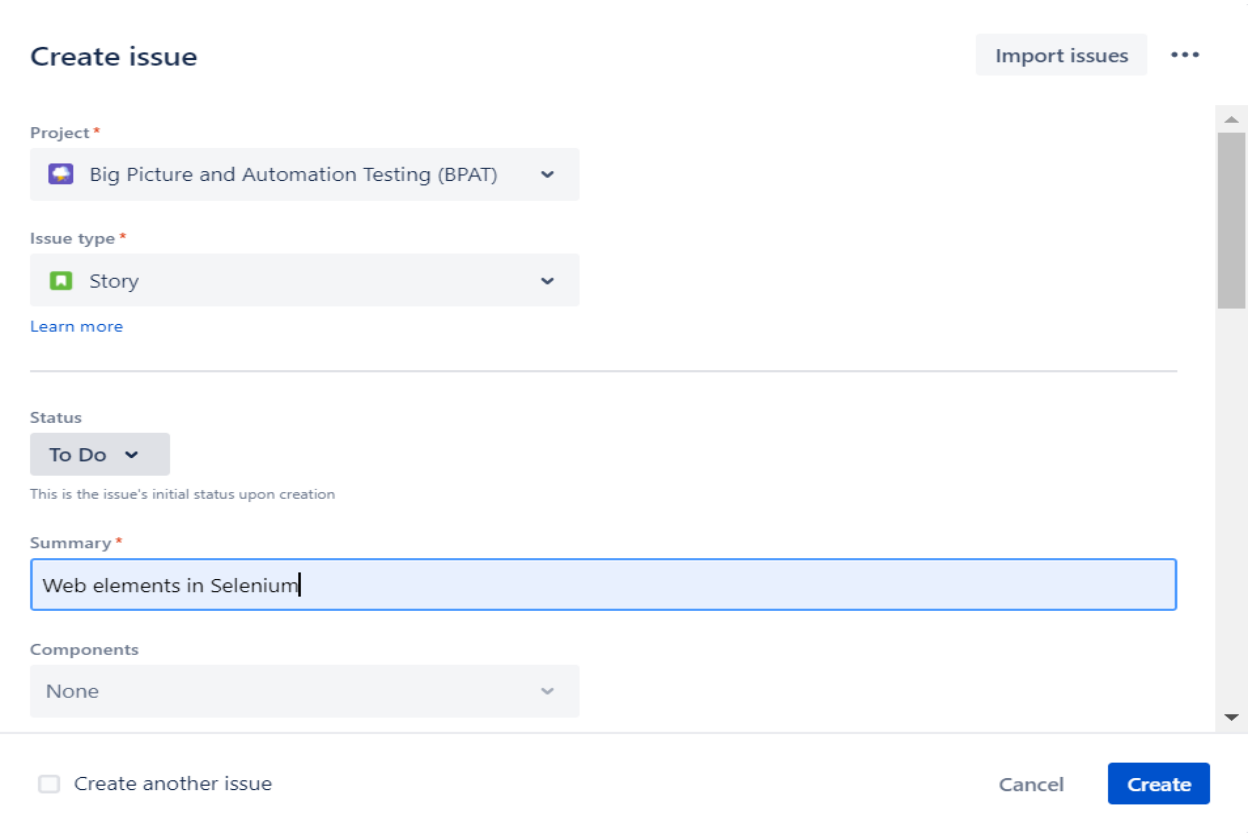
i) Entering the version details and the timeframe



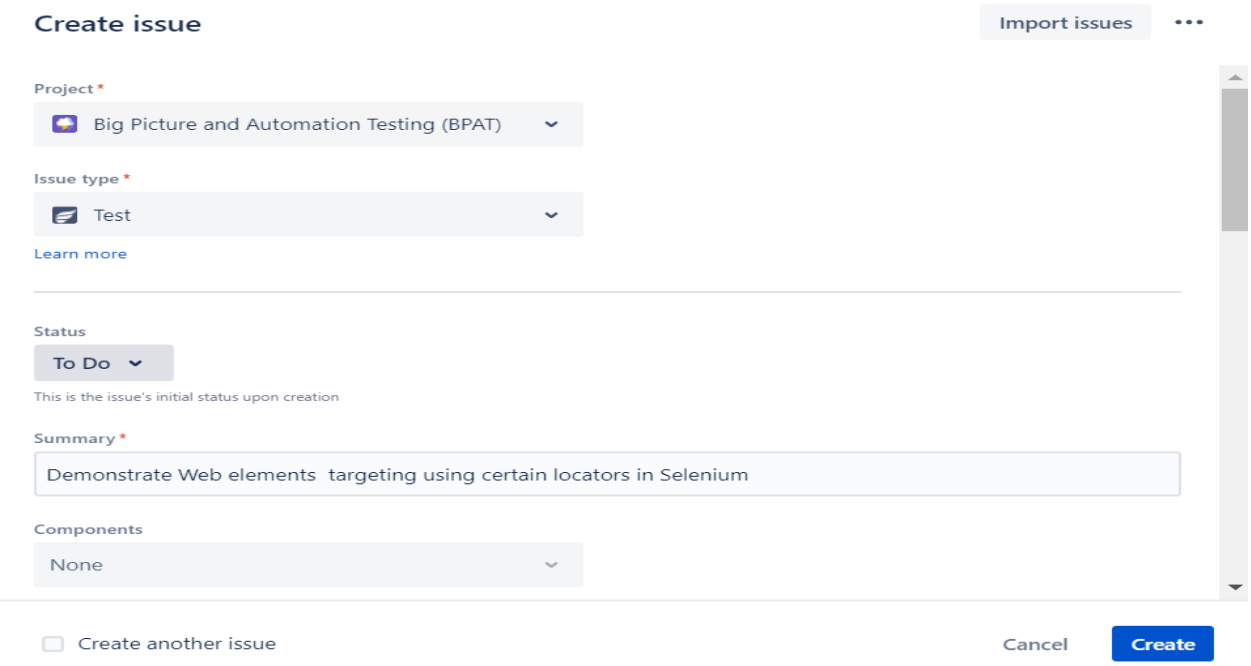
j) creating an epic



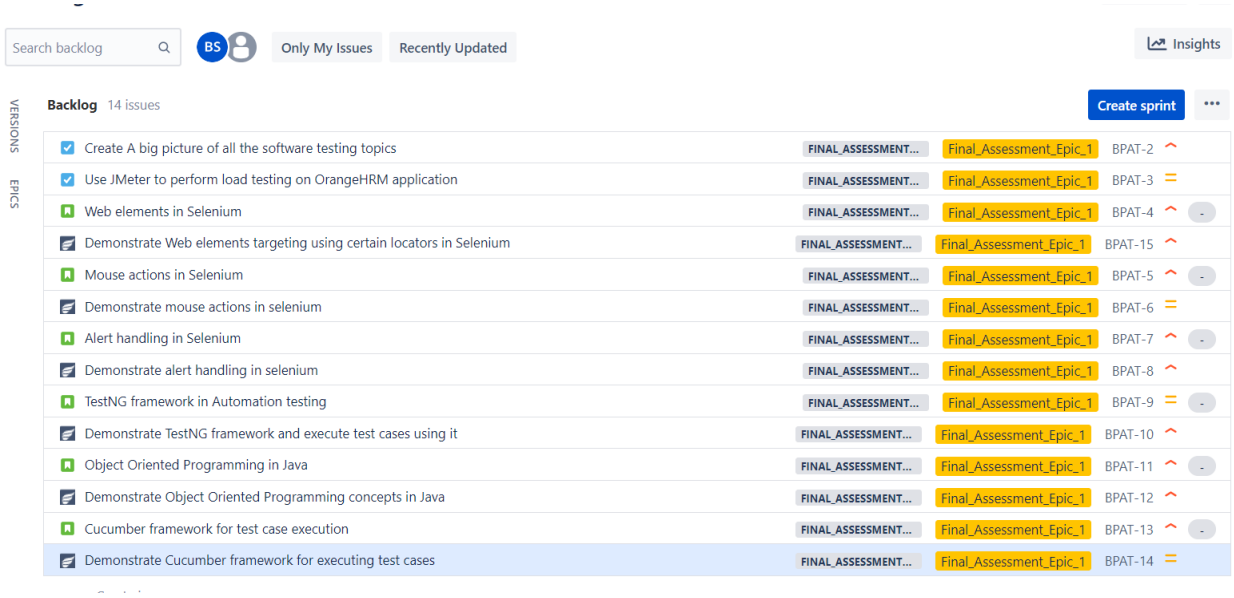
k) Now that version and epic is created, it's time to create the user stories for every section of the automation testing part of the final assessment



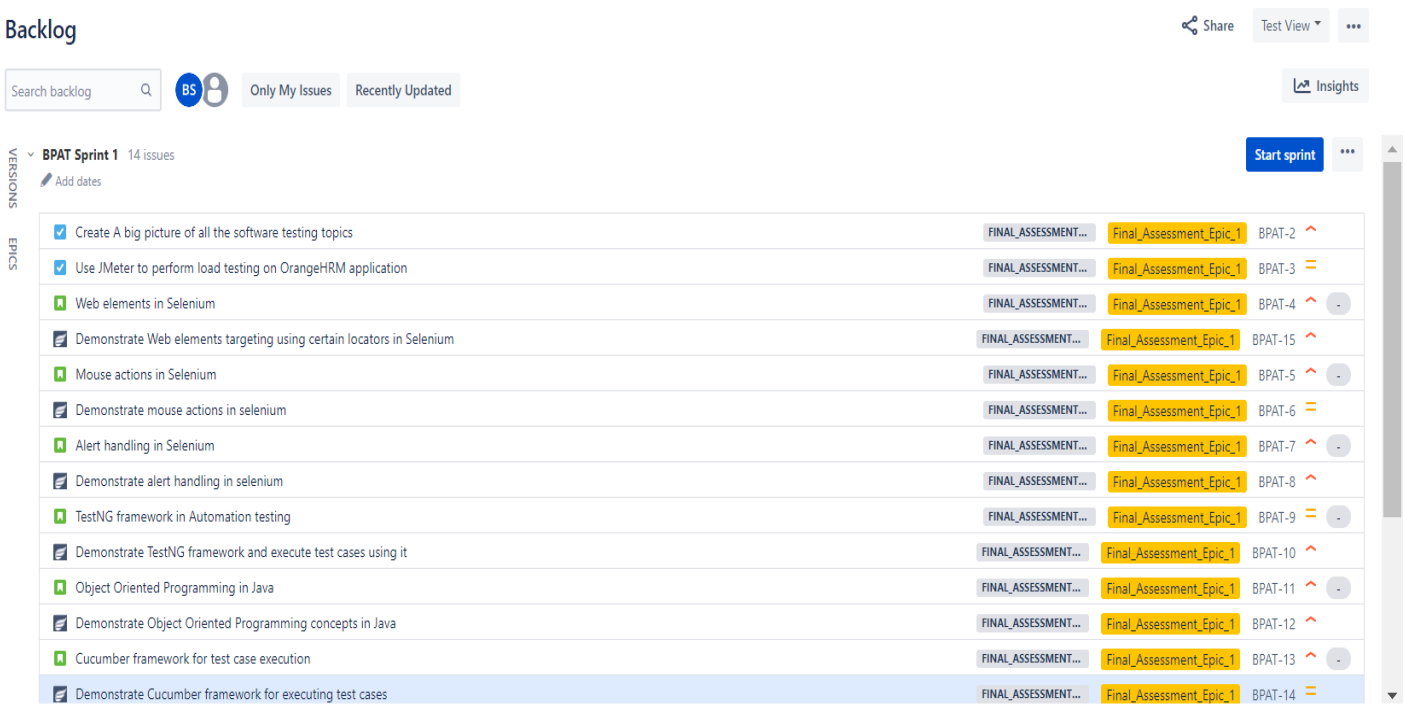
l) Creating a test case



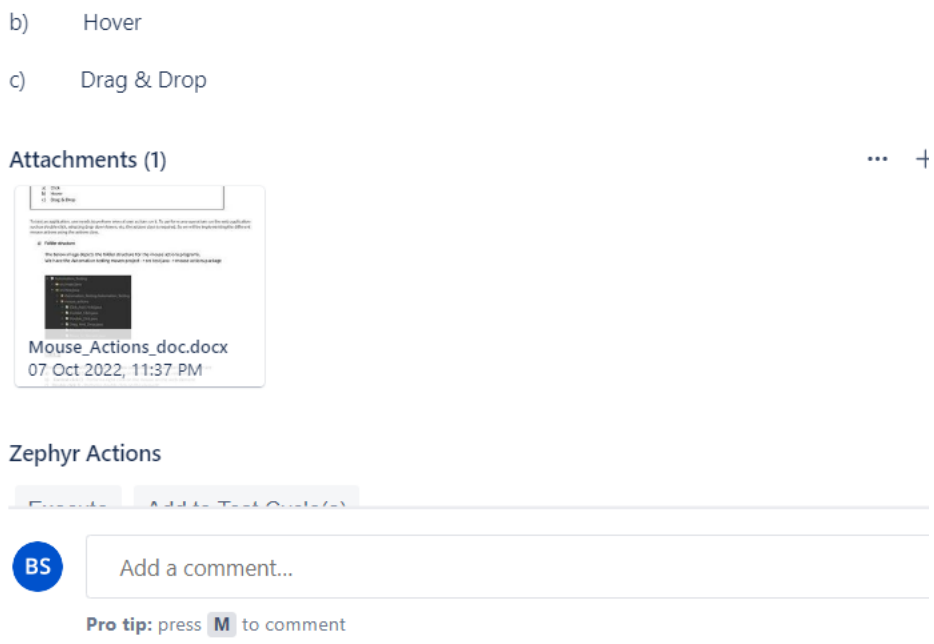
m) Similarly, all the user stories and test cases are created. Once done, the backlog looks something like this

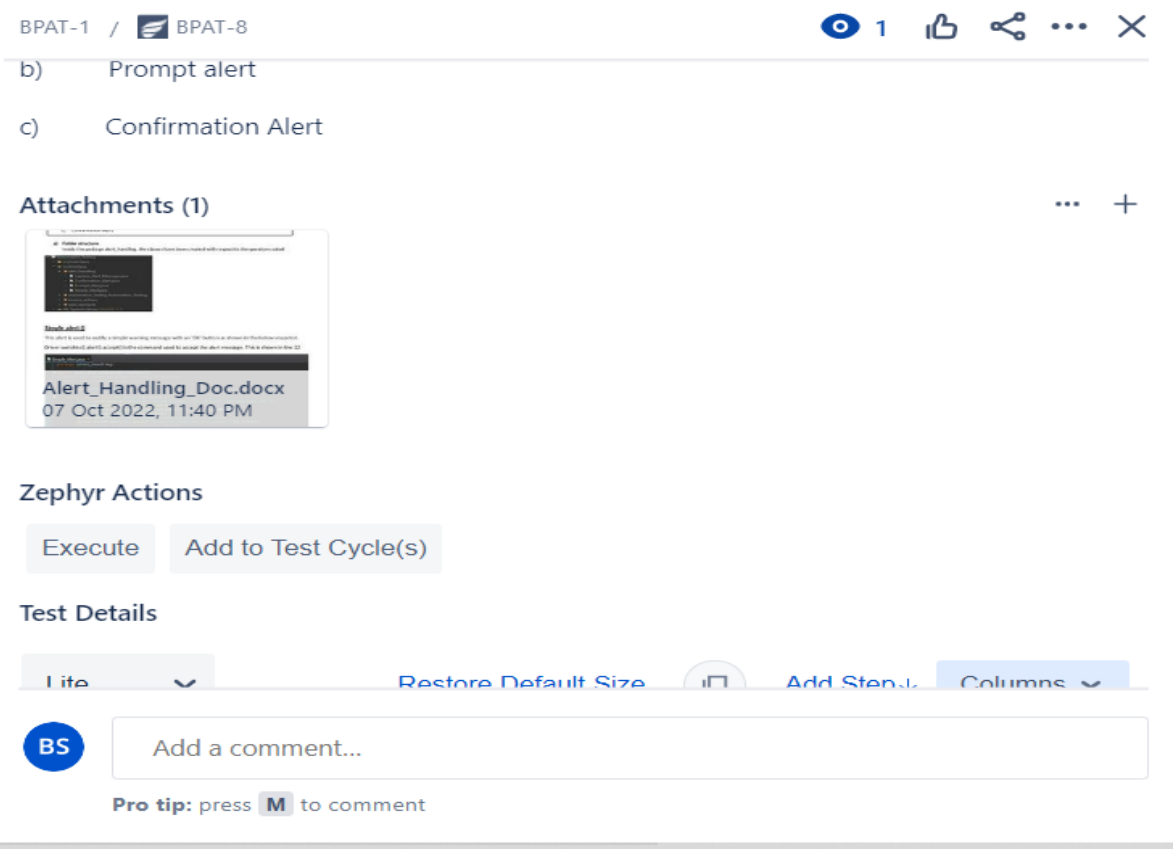


We can now add all these issues into a sprint



n) Now that the backlog is ready, we can add all the attachments required for the test cases as shown in the snapshots below.





a) Write a program to HRM Login

b) Write program to apply leave

c) User method over loading for searching as discussed in the class assignment

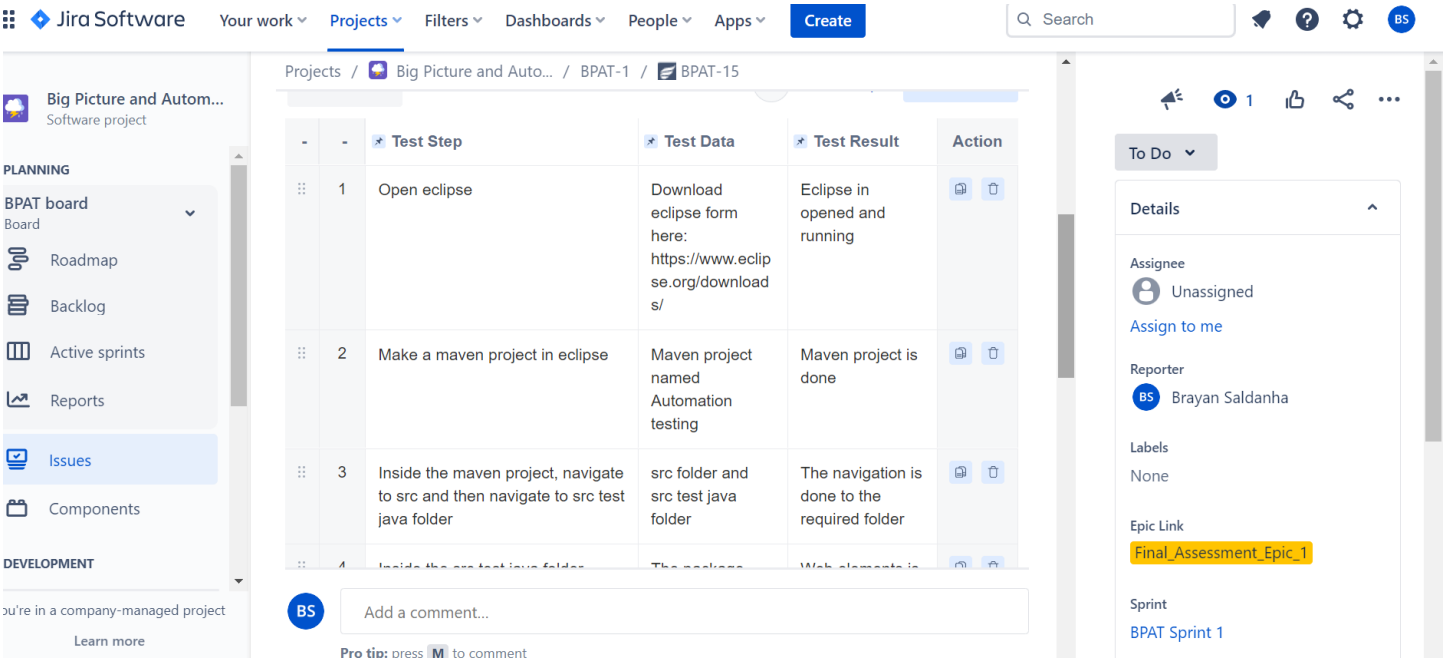
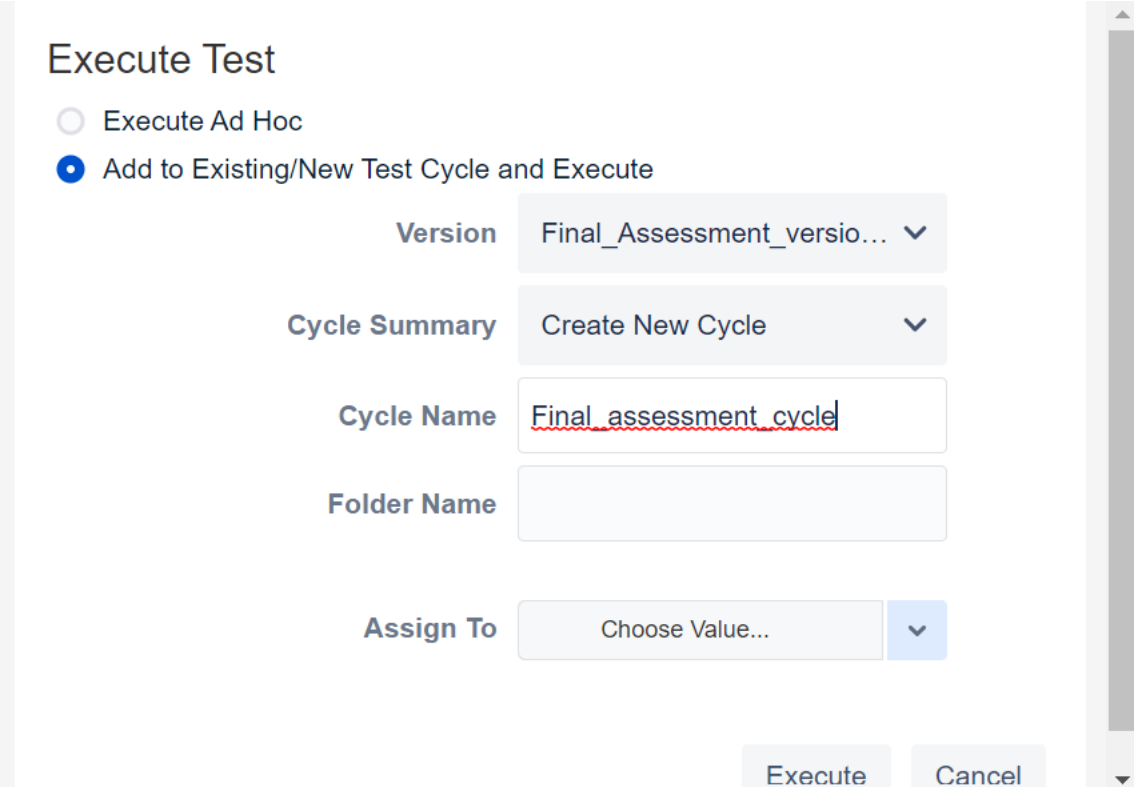
Once the Attachments for all the tests are done, add the test steps



Similarly the test steps for all the tests can be added


Executing the test cases, by adding them to test cycles
